IoShield® Spray

THE SPRAYABLE SECOND SKIN

POST-MILKING

PREVENTION

Application

IoShield Spray® is a ready to use product. After each milking apply IoShield Spray® on the whole teat and do not wipe. Keep the animals standing or walking for 5 mins to ensure biocidal effect. Before the next milking, carefully clean the teats with Ecolab's OxyFoam®.

Features and benefits

IoShield Spray® contains PVP iodine, which due to its unique PVP carrier eliminates bacteria and disinfects the teats.

The quick drying, polymerising Shield of IoShield Spray® protects the teats between milking. It is used as part of a herd health plan for the prevention of mammary infections and provides protection from pathogens outside the udder and the environment.

IoShield Spray® provides prevention and protection irrespective of any cow, herd or environmental challenges. Clearly visible on the teats once applied, IoShield Spray® allows a quick and safe milking routine. Easy to remove, the formulation enables easier removal.

Specifications

IoShield® Spray	
Physical form	Liquid
Colour	Clear dark brown
Active substance	Iodine (PVP)
pH at 20°C	5.0 – 5.5
Density at 20°C	0.99 - 1.03
Storage temperature	+5°C to +25°C

Logistics
